Section - Installation of Julia and Jupyter notebook

Julia installation

Go to https://julialang.org/downloads/ and download the current stable release for your operating system, then run the installer.

Go to https://julialang.org/downloads/platform.html if you encounter any problem.

Jupyter notebook installation

Run the Julia application, a window with a `julia>` prompt will appear.

To install IJulia, at the prompt, type:

```Julia
using Pkg
Pkg.add("IJulia")
```

To run the notebook and to launch the Jupyter notebook in your browser, type:

```Julia
using IJulia
notebook()
```

Alternatively, you can run

```Julia
jupyter notebook
```

from the command line (you should add jupyter to your PATH).

Go to https://github.com/JuliaLang/IJulia.jl if you have get other problems using Julia with Jupyter notebook.
